Made in Canada: An Action Plan to Transition to a Greener Economy

May 7, 2021

While there has been considerable discussion about the global rise in greenhouse gas emissions over the past five decades, efforts to develop an international framework to address this global crisis have failed to demonstrate real promise. The phased-in adoption of a comprehensive, proactive and transparent carbon mitigation plan by Canadian companies could represent the first of several steps in establishing Canada as a leader in the creation of a climate-smart economy.

In this series of articles, Cameron Mingay and Jackson Phillips canvas the need for, and the feasibility of, such a plan.
